DETAILED ACTION

Claim Rejections - 35 USC § 103

1. Claims 1-65 are rejected under 35 USC 103(a) as unpatentable over Burge(US Pat. No: 6,014,638) in view of Lupien(US Pat. No: 6,012,046).

2. As per claims 1-65 Burge teaches a system for customizing content and presentation of content for computer users(Abstract)(col 3 line 45-col 4 line 30). Burge also teaches monitoring and recording a user's navigational choices(col 7 lines 26-30) to determine the user's needs and preferences for subsequent computer displays(Fig 2A)(col 6 lines 50-67). Burge also teaches that displays are customized in accordance with the user's needs and preferences(Fig 2B/48)(col 6 lines 40-43). Burge also teaches an electronic shopping and marketing system accessible via the world-wide-web(col 4 lines 52-56). Burge further teaches that the shopping environment and the content presented to the shopper and presentation of displays is customized (Fig 2B)(col 7 lines 6-11). Burge also teaches that the functions of data collection and display customization are performed automatically by the electronic shopping system(col 7 lines 39-46). Burge teaches to customize the environment various attributes of Web pages or displays provided by participating merchants are modified as they are accessed by users of the system(Fig 2B/32). Burge also teaches a merchant's option database(Fig 2B/34) as well as a user profile database(Fig 2/18) and general display variables(Fig 2B/42) derived from a variable display characteristics database(Fig 2B/44). Although Burge does not specifically disclose the use of vendor rules, Lupien teaches(col 3 line 65-col 8 line 51)

Art Unit: 3624

a crossing network that matches buy and sell orders based upon a satisfaction and quantity profile that includes a number of trader terminals that can be used to enter orders(Abstract)(Fig 1). Lupien teaches that the overall architecture of the crossing network includes a central matching controller that matches buy and sell orders transmitted to it from the trader terminals(col 6 lines 15-29). Lupien also teaches that orders are entered into the system in the form of a satisfaction density profile that represents a degree of satisfaction to trade a particular instrument at particular price and quantity parameters(col 6 lines 40-65). Lupien teaches that the orders are buy and sell orders and that the matching controller computer can receive as input the satisfaction density profiles entered at the trading terminals(col 6 lines 59-60). The matching controller computer matches orders as measured by each trader's satisfaction density profile so that each trader is assured that the overall outcome of the process in terms of average price and size of fill has maximized the mutual satisfaction of all traders(col 10 line 40-col 11 line 16). Lupien also teaches that the matching process can be continuous or batched or a related combination(col 12 line 46-col 15 line 15)(Fig. 8). Lupien also teaches that unmatched satisfaction density profiles are used to provide spread and pricing information(col 11 line 21-col 12 line 45). Lupien also teaches that market depth can be derived from the aggregate density profile(col 11 lines 60-65). It would have been obvious to one skilled in the art at the time of the invention to combine Burge in view of Lupien to teach the disclosure. The motivation to combine is to teach a method for conducting e-shopping to continuously satisfy the buying and selling desires of market participants as enunciated by Lupien(col 3 lines 40-43).

Application/Control Number: 09/781,042

Art Unit: 3624

Claim Rejections - 35 USC § 101

3. Claims 47-65 are further rejected for failing to provide a concrete, useful and tangible result.

Claim Rejections - 35 USC § 112

4. Independent claims 1,18,20,24,41-43,47,64-65 are further rejected under 35 USC 112(2nd) for failing to adequately define the invention. These independent claims are indefinite.

Conclusion

5. THIS ACTION IS MADE NON-FINAL.

6. Any questions concerning this communication should be addressed to the examiner of record, Dr. Geoffrey Akers, P.E., who can be reached between 6:30 AM and 5:00 PM Monday through Friday at 703-306-5844. If attempts to contact the examiner are unsuccessful, the examiner's superior, Mr. Vincent Millin, SPE, may be telephoned at (703)-308-1065.
